704 most energetic and official fashion. As a rule, however, they
703 contented themselves with getting over the ground. Many
714 of the recruits viewed their trousers with very grave suspicions. They evidently thought that unless precautionary measures were adopted, the article would slip off, and therefore, with a vigilance which did credit to their sense of modesty, held on tight with one hand to their continuations. Perhaps the tailors were to blame. But in any case the attitude was undignified, and certainly not military. The garment was not regarded with any favour even by the veterans. When the ahmudan were on guard they generally wore the ordinary waistcloth and carried the trousers in one hand to show their status. The tunics were almost never worn except at the reviews.

704 Between regiments came four cannon, pulled by men,
● 713 and with little pennons stuck in the touch-holes. Two gunners accompanied each two-pounder, one carrying a galvanised tin bucket and the other a big canister, intended for shot and powder, but singularly unfitted for such material on a campaign. Sponges and rammers were wanting, and were said to be intentionally so in the hope that the guns might be mistaken for breech-loaders, and the men who drew the pieces were the bombardiers.

704 After the infantry, at an interval of two hundred yards,
714 came two regiments of cavalry, numbering about five hundred lances in all. They wore helmets of Grecian pattern, like cuirassiers, but otherwise were in the national dress. The second of the two was the celebrated "Kathé Horse," who have won in English books on Burma a fame unknown in their own country. They were dressed in French grey jackets and red pasos, and looked very well; but their mounts were very poor for a country where ponies are so plentiful and where it was so easy for the commander to demand their excellence. The saddles had long flaps or wings hanging down in front to protect the riders' bare legs when riding through underwood, but it was so long since they had been in the jungle that the flaps were more of a decoration than a necessity. Cavalry is an arm of the service of little use in a country like Burma, but with their long slender lances and splendid trappings they made a fine show, and

not very much more could be said for the infantry—not so much in some cases.

705

The lancers were followed by the commissariat and control departments, a rabble of men carrying pots and pans and rolls of bamboo matting and boxes intended for ammunition, but containing none, and huge wicker baskets, besides a lot of other baggage which might be useful, but did not look like it. There were five or six hundred of these men, guarded by a handful of dah and spearmen.

In their wake followed the artillery corps; first, thirty or forty two-pounders, similar to those between the different regiments, and with the same complement of men to each gun, and the same appliances. Then the elephant battery, each elephant with two jingals mounted on the howdah. These jingals, throwing a half or three-quarter pound ball, with their long pointed tails and muzzles pointed up to the skies, look very much like telescopes from a distance. In actual warfare they would probably do nothing beyond scaring the elephant. Besides the mahaut, each elephant carried a man to manage the guns. Fifty of them were loaded with this mosquito artillery, and behind them came fifty more with nothing on them but the mahaut. Many were most magnificent tuskers, and they constituted the most valuable part of his majesty's army.

Behind the elephants came the heavier guns, drawn by buffaloes, but they were apt to stick in the heavy, unmade roads, and the buffaloes themselves were not easy brutes to manage, especially on a warm day when their skin begins to crack. This battery, therefore, usually went but a short distance. These heavy guns were mostly very ancient ship guns of Portuguese, Dutch, French, and Arakanese make, and would be considered valuable in an English parish museum. They were formidable to none except primitive mountaineers, and to them chiefly from the noise they made.

[175]

As this account shows, Thibaw's army was neither threatening nor efficient, and the events of 1885 bore out the estimate. When the time came for adding Upper Burma to the British dominions it was effected with the least possible amount of bloodshed on either side. It might be supposed from what has been said that the ahmudan
